

RISK ASSESSMENT

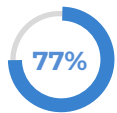

Is Your Organization at Risk of Cyberattack?

Info-Tech's Certified Consultants Perform Thorough Risk Assessments so You Can Take Action Accordingly and Keep Your Company Safe From Cyberattack.

How severe is your cyberthreat exposure? What's the likelihood that your vulnerabilities will be exploited? A solid security foundation is the key to keeping your company's brand, intellectual property, clients' personal information, and data insights strategically safe. Ad hoc plans will not suffice – you need a plan of action that not only ensures your understanding of risk is up to date and right-sized for your organization but also adheres to regulatory requirements such as PCI, HIPAA, SOC 2, and ISO 27002.

How would a cyberattack impact your organization, your clients, and your reputation?

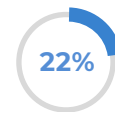

Consider This:

77% of security leaders are anticipating a critical infrastructure breach.

34% of breaches involve an insider.

22% of organizations have limited resources available to respond to a security incident.

Our Detailed Risk Assessments Will Help You:

- ✓ Educate staff and stakeholders on risks
- ✓ Evaluate flow of data within organization
- ✓ Establish third-party security
- ✓ Document risks that show due diligence
- ✓ Identify risks and threats
- ✓ Reduce risk of financial loss
- ✓ Secure company brand
- ✓ Ensure privacy
